TO: All AI-Tek Distributors and Rep

SUBJECT: Stacktach Obsolescence

As of September 4, 2008 we can no longer offer our Stacktach, P/N T77410-10. We still have programming pendants, P/N T77410-P, available, as well as power supplies, P/N T77410-100/240AC, for applications which do not have 24 VDC power supply at this time.

The Stacktach can no longer be built and had to be obsoleted for the same reason that our other, older tachometer line was obsoleted, certain key components are simply no longer available.

Our suggestion is to offer our new Tachpak-10, P/N T77510-10 in lieu of the Stacktach if only set point relays are required, or the new Tachpak-30, P/N T77530-10, if relay functions and analog output are required.

Both the Tachpak-10 and Tachpak-30 are mounted on the same din rail as the obsolete Stacktach. The best feature of these new tachs is that they no longer need a programming pendant nor a separate power supply if 24 VDC is not available.

Please refer to the back of the New 2007 Tach catalog for the range of power supply and performance capabilities.
